

No AC Output

1. Check battery unit is turned on.
2. Check the output live indicator is illuminated.

3. Identify if there is no output from the entire system or just an individual socket.
4. Check MCB'S are in the on position.

5. Check main 125a RCD is reset, (press the reset and re-test)
6. Check emergency stop button on battery and generator, twist to release.
7. Check the outgoing sockets and cables for any sign of damage or faults.
8. Check generator panel for faults.
9. Check the generator output voltage and frequency are within the expected range.
10. If all above checks have been completed and you still have no AC output, turn off the battery system, open the left hand doors, turn the inverter switch on each inverter to the off position, wait 60 seconds, turn the switch to the on position and turn the battery back on.
